

Phase Equilibrium Modelling with MAGEMin

Nicolas Riel - Johannes-Gutenberg University Mainz, Germany nriel@uni-mainz.de

Overview

- General introduction and rationales
- Current/ongoing state of development
- Useful links (*repositories, documentation and discord*)

Phase equilibrium modeling: components

e.g.,
tc-ds6xx.txt for TC
hp02ver.dat for Perple_X

e.g.,
a-x models for TC

Phase equilibrium modeling: anatomy of an equilibrium

At fixed P-T conditions

$$\text{Bulk} = \alpha C_{PP} + (1 - \alpha) C_{SS} \quad \left| \quad \text{Mass constraint} \right.$$

$$G_{SS} = C_{SS}^A \mu_A + C_{SS}^B \mu_B$$

$$G_{PP} = C_{PP}^A \mu_A + C_{PP}^B \mu_B$$

Gibbs-Duhem constraint

Why a new Gibbs free energy minimizer?

Perple_X

MELTS

- Developed (in the 90's) to produce phase diagrams
- Natively not parallel
- Minimizations can often fail
- Not optimized for solution update
- Difficult to couple to geodynamic codes (written in Fortran)

MAGEMin: current stage and ongoing developments

Current stage

- MPI parallel C-library with several built-in database
 - Holland et al., 2013; White et al., 2014; Green et al., 2016; Evans & Forst, 2021;
 - Weller et al., 2024; Green et al., 2025;
 - Stixrude & Lithgow-Bertelloni 2011, 2021;
- Benchmarked 1 to 1 against THERMOCALC (for TC database)
- Julia wrapper for petrological/geodynamic coupling (MAGEMin_C.jl)
- Parallel web-browser Julia app (MAGEMinApp.jl)
- Single core performances
 - ~10 to 150 ms without initial guess (scales with #oxides and #solutions phases)
 - ~1 to 20 ms with initial guess

Ongoing development

- Algorithm upgrade to improve performances and stability (Riel et al., 2025, accepted)
- Inversion framework → AutomaticDifferentiation → rewriting MAGEMin in pure Julia

MAGEMinApp

MAGEMin_C

MAGEMinApp.jl

- P-T, T-X, P-X, PT-X, T-T phase diagrams
- Trace-element partitioning
- PTX paths (fractional melting/crystallization)
- Automatic labelling, isocontours, vector format figures, export data as `.csv` etc.

MAGEMinApp: examples of phase diagrams

- World Median metapelite
- Metapelite – White et al., 2014

- Tonalite 101
- Igneous – Green et al., 2025

- Ijolite
- Alkaline dry – Weller et al., 2024

MAGEMin_C.jl

- Programmable Julia interface to MAGEMin
- Parallel calculations (multi-threaded)
- Easy to use

```
using MAGEMin_C
data = Initialize_MAGEMin("ig", verbose=false);
P,T = 10.0, 1100.0
Xoxides = ["SiO2"; "Al2O3"; "CaO"; "MgO"; "FeO"; "Fe2O3"; "K2O"; "Na2O"; "TiO2"; "Cr2O3"; "H2O"];
X = [48.43; 15.19; 11.57; 10.13; 6.65; 1.64; 0.59; 1.87; 0.68; 0.0; 3.0];
sys_in = "wt"
out = single_point_minimization(P, T, data, X=X, Xoxides=Xoxides, sys_in=sys_in)
```

- Stores all output in a structure

```
out.
